LTM-V is a high precision 0-10VDC analog output industrial linear motion transducer with a long lasting conductive track suitable for absolute position measuring in control and measurement applications. Designed for the direct, absolute measurement of displacement or length in control regulation and measuring applications. High resolution (0.01 mm) combined with a stroke length of up to 1000 mm permits the accurate measurement of linear displacement. Rack and pinions or similar devices are not required because the design of the transducers is such that they may be built directly into the mechanical system.

**Applications:** LTM-V Series can be used in a wide range of applications in mechanical and vehicle engineering industries as well as in automation and robotics technologies, combining remarkable robustness with high accuracy.
